Graf Renklendirme

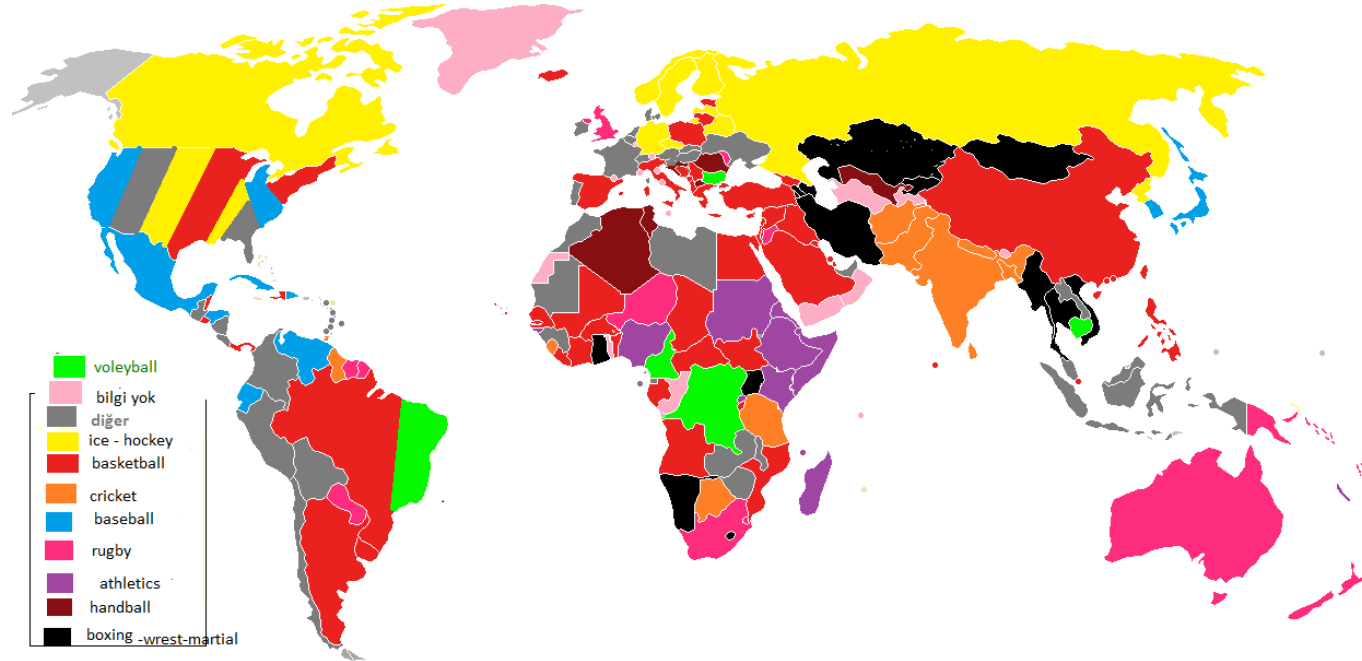

Graf üzerinde birbirine komşu olan düğümlere farklı renk atama

En az sayıda renk kullanılarak tüm düğümlere komşularından farklı renk verme

Kullanılan toplam renk sayısı **kromatik (chromatik) sayı** olarak adlandırılır.

Graf Renklendirme

Welch-Powel Algoritması

Adım 1: Dügümler derecelerine göre büyükten küçüğe doğru sıralanır.

Düğüm	Derece
G	6
D	3
E	3
F	3
C	2
A	2
B	1

Welch-Powel Algoritması

Adım 3: Renk numarası bir artırılır, bu numara daha önce atama yapılmamış düğümlerden derecesi en büyük olana verilir ve adım 2 diğer düğümler için tekrarlanır.

Düğüm	Derece
G	6
D	3
E	3
F	3
C	2

Welch-Powel Algoritması

$4 < \text{Kromatik Sayı}$ ise Graf 3 boyutludur.

$\text{Kromatik sayı} \leq 4$ ise Graf 2 boyutludur (Düzlemseldir).

Kromatik sayı: 4

Kromatik sayı: 5

Dijkstra Algoritması

Dijkstra'nın algoritması belirli bir başlangıç noktasına göre en kısa yolu belirleyen bir algoritmadır. Bir düğümden, yani başlangıç düğümünden, diğer tüm düğümlere olan en kısa yolu belirler. Ağırlıklı ve yönlü graflar için geliştirilmiş olup graf üzerindeki her bir kenarın ağırlığı sıfır veya sıfırdan büyük sayıdır.
